### About the Plamp Stake Extension

The Plamp Stake Extension is an add-on accessory for the Plamp Stake and Ground Plamp. It adds more than 10 inches to the height of the pipe sheath. Multiple extensions may be used to achieve desired height.

We have found that it is possible to connect 4 extensions before the assembly begins to lose its ability to dampen movement in the subject. A greater number of extensions may be used for holding a reflector or other item.

The extension is UV protected to prevent yellowing and becoming brittle when exposed to the elements.

The extension is also compatible with standard **3/4" Schedule 40 PVC pipe** allowing you to get creative with hardware store PVC fittings and pipe to create custom setups in the field.

Thank you for your interest in Wimberley products. If you have any questions or comments feel free to contact us.
