

About the AP-11

The **AP-11 Dovetail Adapter** attaches to older Kirk and Really Right Stuff lens plates that have a single dovetail on the bottom edge of the lens plate. It allows these plates to be used with the Wimberley Modular Flash Bracket System™ by adding a secondary Arca-Swiss style dovetail to the top edge of the plate. Add this adapter to your older Kirk or RRS plates to connect the following Wimberley products:

- **F-1** Telephoto Flash Bracket
- **F-6** Sidekick™ Flash Bracket
- **F-9** Wimberley Head Version II™ Flash Bracket
- **M-1** Quick-release Arm Flash Module

This adapter can also be used to attach quick-release flash brackets made by Kirk or Really Right Stuff.

Dimensions (Overall L x W x H): 1.5 x 0.81 x 0.24 in
Weight: 0.7 oz
Materials: Anodized 6061 Aluminum, stainless steel fastener

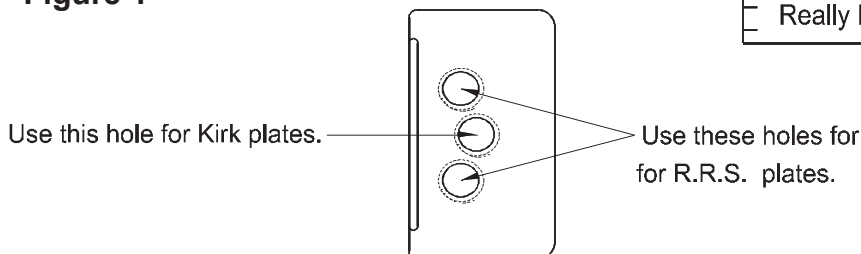

Instructions

Connecting the AP-11 to a Plate:

1. Attach the AP-11 plate to the lens plate where you would normally attach a flash bracket. Use the enclosed hex key and fasteners - one fastener for Kirk plates, two fasteners for Really Right Stuff plates (see Figure 1).
2. Attach the plate so that the end with the lip faces the middle of the lens plate (see Figure 2).

Note: after attaching the AP-11 Adapter to your lens plate, you may find that there is not enough clearance between the adapter and the lens barrel to allow you to attach the flash bracket. If you have this problem, you may need to buy a Wimberley lens plate rather than use the adapter with your existing lens plate. If this is the case, you can return the AP-11 for a full refund including shipping costs. Call or email us to request a Return Authorization number.
